

COMPLETE MANAGEMENT

Health establishments are faced with the problem of how to collect and dispose of waste and with the in-house organization of waste collection logistics.

More and more establishments will have to outsource waste management.

GAP HYGIENE SANTE has at its disposal all the necessary techniques, equipment and services to provide a complete service for:

- All types of waste
- The management of waste from production to final processing
- The setting up and management of a waste disposal centre *in situ*

● AVANTAGES

Quality: hygiene, control over sorting procedures, guarantees for the entire disposal chain

Safety: experienced staff; training staff provided for the establishment

Budget control: optimization of flow management and the quantity of waste throughout the disposal chain, with one entity in charge of the entire process

Respect for the law and the environment.

● DIAGNOSIS OF WASTE: an essential audit

First of all SITA makes an inventory of what already exists and identifies the needs and expectations of the establishment:

- the nature and volume of waste produced
- grouping, storage and collection points for waste
- a study of the flow and the logistics of waste collection
- material and human means

EXAMPLE OF VOLUME AUDIT

Building	Floor	Department	Type of Waste	Audit date	Time	Qbox 25l	Qbox 50l	Vbox	Wbox	Qdrums25l	Vdrums26l	Wdrums26l	Qsacks100l	Vsacks100l	Comments
A	1SS(Basement)	Kitchens	HR(Household refuse)	3/6	10:00		1	50	7					1000	
A	1SS(Basement)	Pharmacy	MW(Medical Waste)	4/6	08:15									300	
A	RDC(Ground floor)	Radiology	HR/MW	3/6	10:35	4	2	200						800	
A	RDC(Ground floor)	Radiology	Cardboard boxes	12/6	15:25										
...										

The audit recommendations allow waste management solutions to be optimised.

● TRAINING

A training programme is set up in collaboration with the establishment to give its staff and their managers information about and awareness of the need to develop new systems and means of sorting.

● THE SERVICE

GAP HYGIENE SANTE and its business partners provides the establishment with :

- packaging materials
- collection equipment
- staff : for in-house collection, management of the waste disposal centre and maintenance of equipment

● THE WASTE DISPOSAL CENTRE

The waste disposal centre is a consolidation hub which enables the separate and centralized storage of different types of waste and their transfer to the appropriate processing plants.

The waste disposal centre enables on-site hygiene to be improved.

Waste that can be included in Household Refuse

- With recycling of material : cardboard, paper, glass...
- With recycling of energy : food leftovers

Waste from Health Care Posing a Risk of Infection Special Waste

- Laboratory effluents
- Batteries
- Machine waste liquids
- Mercury
- Medicines...

● MONITORING THE SERVICE

Within the framework of a complete management package, GAP HYGIENE SANTE has developed monitoring tools and performance indicators to measure the quantitative evolution and the quality of the service provided
